Report

28th March 2024 – 20th April 2024

Legal Aid Centre ISR Activity

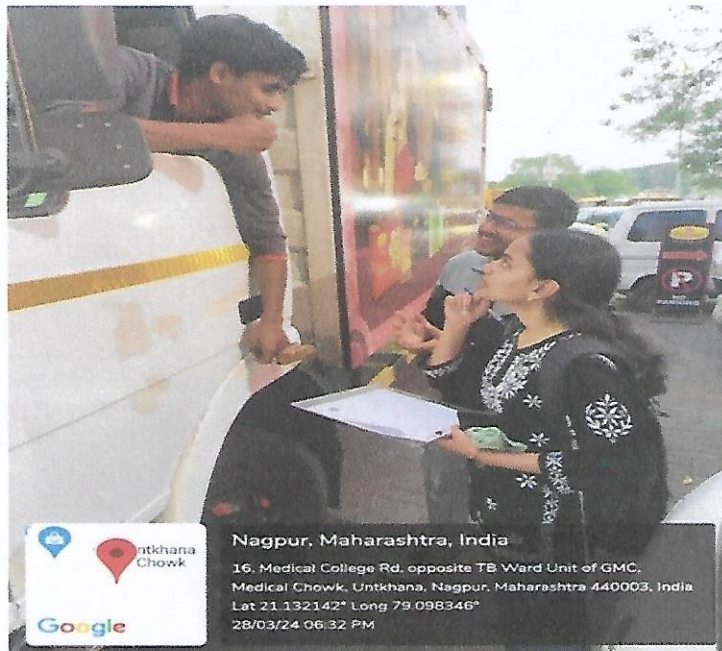

Use of Upper/Dipper Lights in Motor Vehicles And Awareness on save water

The Legal Aid Centre at Symbiosis Law School, Nagpur conducted ISR activities on two issues: first, raising awareness about the use of dipper lights in vehicles while driving at night; and second, addressing the issue of water scarcity in the city and the importance of water conservation. Total 30 students participated in the awareness program. Team of the students were divided in groups.

The Legal Aid Centre at Symbiosis Law School, Nagpur, conducted an awareness program on road usage while driving. The primary focus of the program was to raise awareness among people regarding accidents that may occur due to the negligent use of high beams during night driving. The awareness program started from March 28th, 2024, to April 20th, 2024, in the city of Nagpur.

This awareness initiative was conducted as part of Pro Bono Services under the esteemed leadership of Dr. Sukhvinder Singh Dari, Director of SLS Nagpur, and under the guidance of Dr. Deepti Khubalkar, Faculty In-charge of the Legal Aid Centre. The aim of the program was to raise awareness and collect data related to the usage of upper/dipper lights in motor vehicles and the challenges faced by pedestrians and drivers due to the use of high beams in urban areas.

Awareness activities took place at various locations including Medical Square near V.R Mall, Nandanwan, Dharampeth, Wathoda, and Wardhaman Nagar. The student team successfully collected 110 responses. According to the data collected and interactions with the public, it was observed that while people are aware of the difference between upper and dipper lights, the majority of them encounter difficulties while driving due to the prevalent use of high beams by riders. Out of the 110 responses, 97 individuals reported facing difficulties in night driving due to the use of high beams or LED lights by oncoming vehicles. Additionally, approximately seventy-three people were aware of the proper usage of dipper lights in the city during night time.

The second awareness program was conducted in East Nagpur regarding the water issues faced during summer and the available water sources for the residents. Participants were queried about the water supply provided by the corporation and the quality of the water received. It was reported by the locals that the water supply is limited to morning hours. At times, when the water is not supplied or during the rainy season when the water becomes muddy, residents rely on water tankers provided by the corporation or fetch water from wells. It was observed by the students that some wells in the area are not adequately maintained. Some wells are full of garbage.
